

# MyCloudIT - The Azure RemoteApp Replacement YOU want, for less!

## Our Approach: The Easiest Way to Deploy RDS on Azure IaaS

RDS on Azure IaaS is a more powerful, customizable and flexible way to deliver remote apps in Azure. Think about more control over your deployments and resources; the ability to quickly scale to hundreds of users or a full remote desktop experience, and the flexibility to turn "On/Off" the sessions based on your customer's working hours.

With MyCloudIT, you do not need to be an Azure expert to create your own RDS environment in Azure. Our automated RDS platform removes the complexity of building and maintaining deployments, so you can focus on managing users and applications to deliver the best remote app experience possible in Azure.

## Your Solution: A Better, More Flexible Way to Deliver Remote Apps in Azure

Combining the simplicity of ARA with all the customization and flexibility of a native RDS deployment, the MyCloudIT platform can dynamically scale to meet your growing need in the Azure cloud. It's time to expand your cloud business with a new, robust technology.

## Simple

- ➔ Setup in 30 mins with automated ARM templates
- ➔ Deploy, manage, & monitor from a single dashboard

## Customizable

- ➔ Automatically turn on/off resources to save money
- ➔ Easily create & manage app collections & user groups

## Scalable

- ➔ Rapidly scale from 1 to 100s of users in a few clicks
- ➔ Switch from Remote App to Desktop deployment

## Azure RemoteApp, Citrix XenApp Essentials or MyCloudIT?
